

Fermi National Accelerator Laboratory

EXTRUDED SCINTILLATOR R&D FOR MINERVA

Anna Pla-Dalmau
Fermilab

Victor Rykalin
NICADD, Northern Illinois University

Minerva Collaboration Meeting
October 7-8, 2005

PROGRESS FROM JULY MEETING

- Underwent First Design and Cost Review
 - Pursue official drawing for ID and OD scintillator shapes – done
 - Extrude at 100 kg/h – done
 - Determine crate sizes for ID and OD scintillator
 - Evaluate shipping
- Placed many P.O.s
 - R&D and production dopants
 - R&D and production PS pellets
 - Dies, TiO₂ pellets, labels

PROGRESS FROM JULY MEETING

- Extruded at 100 kg/h
 - It is possible
 - Triangle has smaller base
 - Cooling of strip is more difficult
 - Check attenuation length vs rates at 75 and 50 kg/h
 - Residence time (down) vs melt temperature (up)
- Continued to monitor feeder performance
 - Checked fluorescence of strips
- Checked simultaneous extrusion and drying of pellets
 - High nitrogen flow in system seems OK.

THE CO-EXTRUDER IS COMING!!!

- Delivery **next week**: Monday, Tuesday?
 - Start-up visit: Oct 17
- Electrical work: done
- TiO₂ pellets: here
- Dopants: here
- PS pellets: available
- Co-extrusion die: in place

FNAL/NICADD EXTRUSION FACILITY

FNAL/NICADD EXTRUSION FACILITY

THE CO-EXTRUDER CHALLENGE

- How will the capstocking look at the tips?
 - Bottom corners – too thin?
 - Top corner – too thick?
- No mixing with core material
- TiO₂ concentrate WHC – 26311-A
 - 60% TiO₂
 - 40% PS, waxes, dispersants
 - PS is not Styron 663, but MIPS
 - Used in MINOS, K2K, up to 2005

CO-EXTRUDER DIES: MINOS

CO-EXTRUDER DIES: K2K, ADAPTER

← **K2K**

ADAPTER

NEXT STEPS

- Co-extruder R&D (installation)
 - 1 month – **October – November 2005**
 - Run triangle die with capstocking
- ID tuning and prototyping
 - 2 months – **November and December 2005**
- OD tuning and prototyping
 - 2 months – **January and February 2006**
 - Final size – TBD
